Fellowships & Awards

Rising Stars in Data Science, University of Chicago, 2026
PhD Fellowship Finalist, Two Sigma, 2026
Presidential Scholarship, Harvard University, 2022
Undergraduate Thesis Prize Winner, Forethought Foundation for Global Priorities Research, 2020
Phi Beta Kappa, Yale University, 2020

Teaching

Causal Inference in Economics (PhD, Spring 2025, 2026, Davide Viviano)
Time Series (PhD, Fall 2024, 2025, Neil Shephard)
Unleashing Novel Data at Scale (PhD, Spring 2021, Melissa Dell)

Employment

Harvard University, Data Science Fellow in Deep Learning, 2020 to 2022

Job Market Paper

Interpretable Discovery from Unstructured Data: A High-Dimensional Approach

I propose an automatic, general-purpose framework for making discoveries from unstructured data (e.g., text data from open-ended surveys of economic beliefs). The framework leverages recent methods from the literature on AI interpretability to transform unstructured datasets into high-dimensional, structured datasets of human-interpretable concept measures; specifies parameters and null hypotheses of interest based on these concept measures; tests these hypotheses using algorithms validated by new results in high-dimensional multiple testing, producing a selected set ("discoveries"); and automatically generates and evaluates natural language descriptions of the concepts associated with these discoveries. The proposed framework has few researcher degrees of freedom, is robust to data snooping, mitigates under-exploration, and facilitates fast and inexpensive sensitivity analysis and replication. I revisit applications to recent descriptive and causal analyses of unstructured data in empirical economics, and find this framework is able to automatically replicate existing discoveries, add nuance to others, and make entirely new discoveries as well.
